**PUNTA LOCK, EURO-LOCKS.** A PUNTA lock is an affordable and reliable locking solution. Always delivered with PUNTA keying. Master key available on order.

**ABLOY CLASSIC.** ABLOY Classic is a well-known and affordable locking solution. It is delivered with PUNTA keying (serialization), but is also available keyed to the customer's keying on order. Master key on order.

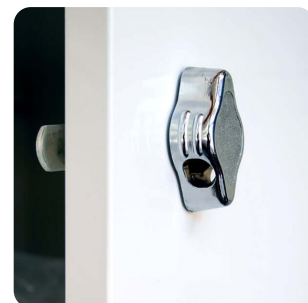

PRODUCT RANGE

## Padlock Latches

**A PADLOCK LATCH** is a reliable and the most affordable solution for locking. It is a good choice for locations where users change frequently. Compatible with padlock shackle diameters from 6 to 8 mm. Compatible padlocks are also available from us.

**EURO-LOCKS C557.** Reliable and compact solution. Available in bright chrome or bright nickel.

**WANG TONG 0903.** A reliable basic padlock latch with a sturdy attachment to the door. Good burglary protection.

# Mechanical Code locks

## – A Reliable, Keyless Security Solution for Every Situation

Mechanical code locks offer a modern, maintenance-free, and keyless solution for securing access to various spaces. They combine simplicity and durability without relying on complex electronics or battery-powered systems. Unlike electronic locking systems, mechanical code locks always work – no power, no network, no software updates needed.

The code lock is operated by entering a pre-set numeric code – no keys, no tags, just a code to remember. This makes them an ideal choice for property maintenance, storage areas, offices, and educational institutions. Outdoor applications such as gates and technical rooms also benefit from the weather resistance and operational reliability of mechanical locks.

## Why Choose a Mechanical Code Lock?

- **Keyless Convenience.** Users can access the area easily without physical keys, eliminating problems related to lost keys and key management.
- **No Electricity, No Worries.** The fully mechanical design ensures the lock operates reliably in all conditions, all year round – even during power outages.
- **Durable Construction.** Made from robust materials that withstand frequent use, harsh weather, and vandalism.
- **Easy Installation and Use.** Most models can be installed on standard doors without special tools or wiring. Operation is intuitive and quick.
- **Secure and Reliable.** Codes can be changed when needed. Mechanical systems are less prone to technical failures compared to electronic locking solutions.

## Suitable for a Wide Range of Use Cases

Mechanical code locks are versatile and well-suited for many environments:

- **Property maintenance and technical rooms:** Fast and secure access without the hassle of key logistics.
- **Offices and workplaces:** Restrict access to authorized personnel only.
- **Educational institutions and public spaces:** Built to withstand heavy use and easy to operate.
- **Industrial and logistics sector:** A secure locking solution for warehouses and distribution points.

PRODUCT RANGE

## Numeric Code Locks

### SINOX AL2003 – Versatile and Durable Code Lock for Demanding Use

Key features:

- **4-digit code** can be easily changed by the user without any special tools.
- **Two operating modes:** The lock features a unique option to choose between public and private mode.
  - In **public mode**, the lock is ideal for shared spaces such as locker rooms where users are not pre-assigned – anyone can set a new code with each use.
  - In **private mode**, the code remains the same until the user decides to change it.
- **Master key option:** A mechanical master key is available, allowing the code to be retrieved and the lock to be opened if necessary.
- **Fully metal construction:** Durable, high-quality, and long-lasting – suitable for demanding applications.
- **Dual-structure, tamper-resistant latch:** Designed to resist prying and tampering attempts. The lock performs reliably even in the most challenging environments and conditions.

### SINOX AL0269 – Versatile and Durable Code Lock for Demanding Use.

Key features:

- **4-digit code lock:** The lock opens and locks itself with a changeable 4-digit code.
- **Private operating mode:** The code remains the same, the user changes it themselves – for completely personal use.
- **Full metal construction:** Durable, high-quality and long-lasting – suitable for demanding use.
- **Double-structured, burglar-resistant crank:** Designed to prevent twisting and burglary attempts.
- **Ease to use:** Changing the code without tools.
- **Master key option:** A mechanical master key is available, with which the lock code can be entered with a password and the lock can be opened if necessary.
- **Versatile:** Suitable for lockers, storage lockers, warehouses, workplaces and gyms.
